

# Common Wall

**No longer will you be bothered by drifting scents or sounds. Cami Comfort Homes is leading the industry with our COMMON WALL. Our single family attached homes are built to reduce sound and eliminate odour transfer.**

*What makes this wall design stand out? It's built to keep your attached home quiet, safe, and efficient. Here's how:*

- **Fire Protection**

- 5/8" Fire-Rated Drywall on both sides (layers 2 & 8) slows the spread of fire between units.

- **Soundproofing**

- 1/2" Drywall (layers 1 & 9) helps dampen sound transfer for extra noise reduction.
- Roxul Safe & Sound Insulation (layers 4 & 7) absorb noise so you won't hear your neighbours footsteps, voices, or late-night TV.
- A 1" Air Gap (layer 5) adds extra sound isolation by reducing vibration pathways.

- **Odour Control**

- Single 6ML Poly Vapour Barriers (layer 6) block odours and prevent mold or condensation buildup, protecting the structure long-term while stopping lingering odours.

- **Strength & Structure**

- 2x4 Studs provide a sturdy, durable frame with dual-stud construction to further isolate sound and vibration between walls.

- **Energy Efficiency**

- Insulation + air gaps = improved thermal performance, keeping your space warm in the winter and cool in the summer.
