

*Cami Comfort Homes is an official EnerGuide Rated Builder. Here are the benefits of purchasing a home that is EnerGuide Rated:*

1

## Certified Ratings

Each one of our homes is EnerGuide Rated by a third party based on our building specifications and a blower door test. Each home will receive a certification with a rating that compares the Cami Comfort Home energy usage to an average home!

2

## Lower Utility Bills

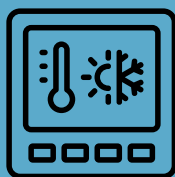

Since our homes use less energy than your average home, your utility bills will reflect that. This means your heating, cooling, and electrical bills will be lower than your average home.

3

## Environmental Impact

By being accountable, through our third party certification and building specifications, Cami Comfort Homes ensures our homes produce fewer green houses gases.

4

## Consistent Temperatures

Major components of the EnerGuide evaluation are insulation, air sealing, triple pane windows, and HVAC performance. All of these components keep even temperatures throughout the home.

5

## Sound Reduction

In our common wall, we use ROXUL insulation to help reduce sound transfer between the attached homes. Not only is ROXUL sound reducing, it is also energy efficient.

6

## Resale Value

Energy efficient homes are becoming increasingly more desirable. The EnerGuide label becomes part of your home's documentation meaning you (and future buyers) know how energy efficient the home truly is.
